

AKUART

Guide for Handing Over Files

Please go through the specific requirements for handing over image files. If you find the below too technical, no need to panic. Just send us the files and we will evaluate if the quality of the files is good enough to be printed as an AKUART product, and will help find a solution if they prove not to be.

Photos

- Adobe RGB (also for photos in grayscale)
- 8-bit
- JPG in the highest quality possible, or
- TIFF with ZIP compression enabled, no layers, or
- RAW photo (with sidecar XML file if edited)
- If the photo is cropped, please send the original file (without cropping).
- Photos should not be scaled. AKUART handles all scaling / interpolation.
- No photos in PDF format (if avoidable)
- 10 mm bleeds will be subtracted from the finished print file.

Photo & Graphics / Text Composition

- InDesign Package
- All fonts must be outlined
- All photo elements in AdobeRGB (see the above requirements for “Photos”)
- Add 10 mm bleed area to the finished print file. Full colour, bleeds must not be empty.
- A margin of 40 mm constitutes the “safe zone” for text, logos, etc.
- No files in PDF format (if avoidable)

AKUART

Guide for Handing Over Files

Graphics (Vector)

- AdobeRGB
- PDF, EPS or AI format
- All fonts must be outlined
- Add 10 mm bleed area to the finished print file.
- A margin of 40 mm constitutes the "safe zone" for text, logos, etc.

Handover Process

- Please send all files via akuart.wetransfer.com and email them to tracy@kireiusa.com.
- Please provide: name, relevant information about order , etc. when sending files through WeTransfer.

For any other questions or concerns, please contact Kirei.
